This book is definitely not straightforward to get started on studying but extremely exciting to read. It is really simplistic but shocks in the 50 percent of the ebook. Once you begin to read the book, it is extremely difficult to leave it before concluding.

In a suitable burner 5 cubic feet of acetylene per hour will give 240 candle-power, while the same quantity of coal-gas gives 16 candle-power. Acetylene is, however, generally burnt in much smaller burners, consuming from to 1 cubic foot per hour. Under these conditions the illuminating power of acetylene is from six times to ten times as great as that of coal-gas. Generators. It would be impossible, within the limits of this chapter, to give a detailed description of the numerous forms of acetylene generator which have been devised. The fact that it is only necessary to bring water into contact with carbide of calcium in order to generate the gas makes the designing of a generator apparently so simple a matter that many inventors have been tempted to devote their energies to the subject. The matter is really not so simple as it seems, and it is upon the many important details of design that the success, and even the safety, of the apparatus depend. In the report of the Committee on the Exhibition of Acetylene Generators at the Imperial Institute...
