

Topographic surveying Including geographic, exploratory, and military mapping, with hints on camping, emergency surgery, and photography

By Herbert Michael Wilson

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 214 pages. Dimensions: 9.7in. x 7.4in. x 0.5in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1905 edition. Excerpt: . . . mountains, plateaus, valleys, etc. 4. Slanting block to represent public work, as railroads, trails, etc. 197. Drafting Instruments-- It is not deemed desirable to describe in detail the various instruments commonly used in topographic drawing. These can be found fully described in catalogues of instrument-makers and in works on mechanical and topographical drawing, lettering, etc. A few instruments, however, which are less common and which are peculiarly serviceable to the topographic draftsman will be briefly characterized. The pantograph is a parallel linked-motion apparatus for enlargement or reduction of maps. It is of occasional assistance in the reduction or enlargement of compiled map material, and is constructed on the theory of parallelograms. (Fig. 149.) The pantograph is, however, a comparatively inaccurate instrument because of the great play between the various parts. If accuracy is attempted, none but the most expensive and heavily constructed instruments should...

Reviews

Comprehensive information! Its this sort of excellent go through. It is packed with knowledge and wisdom You may like just how the author publish this book.
