Typical results are indicated in Figs. 6, 7, 8, etc. These processes may be numbered for convenience 1, 2 and 3 in the order in which they occur. Processes 1 and 2 are in general of about equal duration for a given salt. The abruptness of transition, however, varies greatly, and in some instances the change of slope is so gradual as to encroach seriously on process 2 at both ends. The Influence Of Temperature. The only previous instances of decay of phosphorescence in which the later stages are more rapid than those preceding are noted by Ives and Luckiesh1 in their study of the influence of temperature on phosphorescence, and by E. H. Kennard2 in a more recent paper. Ives and Luckiesh measured the phosphorescence of one of Lenard and Klatts sulphides (BaBiK from Leppin and Masche). This substance...
